Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Webb (U.S. 6,542,371).

Webb discloses a high thermal conductivity heat transfer pad comprising all of the applicant's claimed and disclosed limitation of the instant invention. Furthermore, with respect to a distribution of carbon fibers within the viscous matrix material wherein orientation and location of carbon fibers relative to each other are movable upon flow of the matrix material; and suspending a number of carbon fibers with a substantially random orientation in three dimensions within the non-adhesive viscous matrix material, can be found in (column 4, lines 12-26; lines 42-65, and column 5; lines 9-50).

3. Webb, further discloses the use of a distribution of carbon fibers suspended within a solid or semi-solid matrix material (column 4, lines 43-67 and column 5, lines 16-27).

Wherein given the disclosure and teachings of Webb, it would have been obvious to one of ordinary skill in the art at the time of the invention for the high thermal

conductivity heat transfer pad to have a distribution of carbon fibers within the viscous matrix material wherein orientation and location of carbon fibers relative to each other are movable upon flow of the matrix material (semi-solid material); and suspending a number of carbon fibers with a substantially random orientation in three dimensions within the non-adhesive viscous matrix material.

Doing so would provide a thermally efficient heat transfer pad having enhanced thermal heat transferring characteristics.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Terrell L. Mckinnon whose telephone number is 571-272-4797. The examiner can normally be reached on Monday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene Mancene can be reached on 571-272-4930. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
